1. PROJECT DESCRIPTION

1.1.Brief Description

LAGHATTI ("My Languages" in Arabic) is a **fun, free, and effective** language-learning app that combines **gamification, social interaction, and multimedia** videos, social media engagement, games, and real-time teacher meetings to enhance the user experience and facilitate language acquisition.

1.2. Objectives of the System

✓ Offer an enjoyable alternative to traditional language apps.
✓ Ensure that users engage deeply with the content.
✓ Provide personalized learning paths based on individual goals.
✓ Integrate social media and native content (such as YouTube, movies, etc.).
✓ Ensure accessibility & inclusivity (simple UI, multi-language support).

1.3. Good UX Design Characteristics of the System

.1. Good UX Design Characteristics of the System

1. Usable (Easy to Navigate & Understand)

Goal: Ensure users can interact with the app effortlessly.

- **Clear Hierarchy:** Simple menu structure. For example: 4 main modules: *Games, Meetings, Social, and Movies*).
- **Intuitive Icons:** Recognizable symbols.
- **Minimal Steps:** Achieve goals quickly (e.g., start a lesson in 2 taps).
- **Consistency:** Uniform buttons, fonts, and colors across screens.

2. Equitable (Accessible to All)

Goal: Inclusive design for diverse users.

- **Language Support:** Arabic + target languages (e.g., French, Spanish).
- **Text Size/Color Contrast:** Readable for visually impaired users.
- **Keyboard/Voice Control:** Navigate without touch (for motor disabilities).

- **Cultural Sensitivity:** Avoid stereotypes (e.g., diverse teacher avatars).

3. Enjoyable (Creates Emotional Engagement)

Goal: Make learning fun and motivating.

- **Gamification:** Points, streaks, and unlockable rewards.
- **Micro-interactions:** Celebratory animations after completing a lesson.
- **Social Proof:** Testimonials or leaderboards to foster competition.

4. Useful (Solves User Problems)

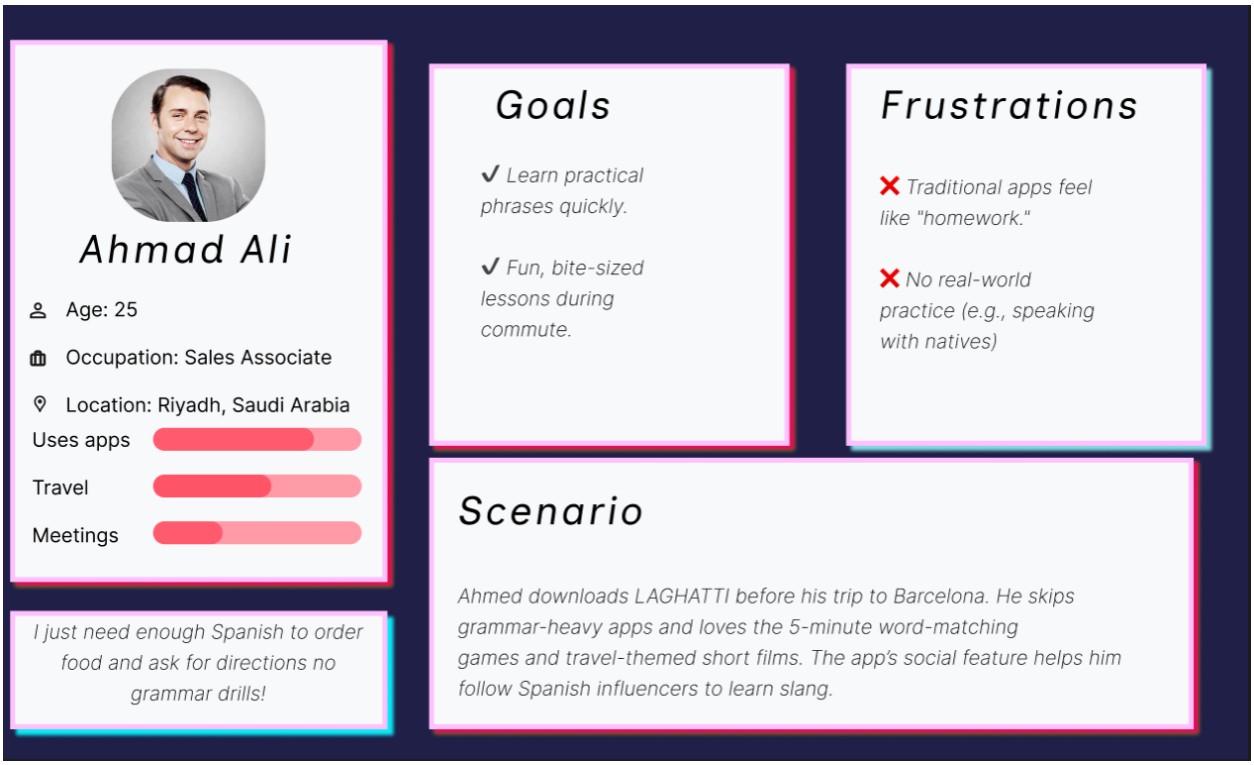

Goal: Deliver real value to learners.

- **Practical Content:** Teach conversational phrases, not just vocabulary.
- **Progress Tracking:** Show improvement example: "You have learned 50 words!").
- **Offline Mode:** Download lessons for low-connectivity areas.
- **Feedback Loops:** Quizzes after videos to reinforce learning.

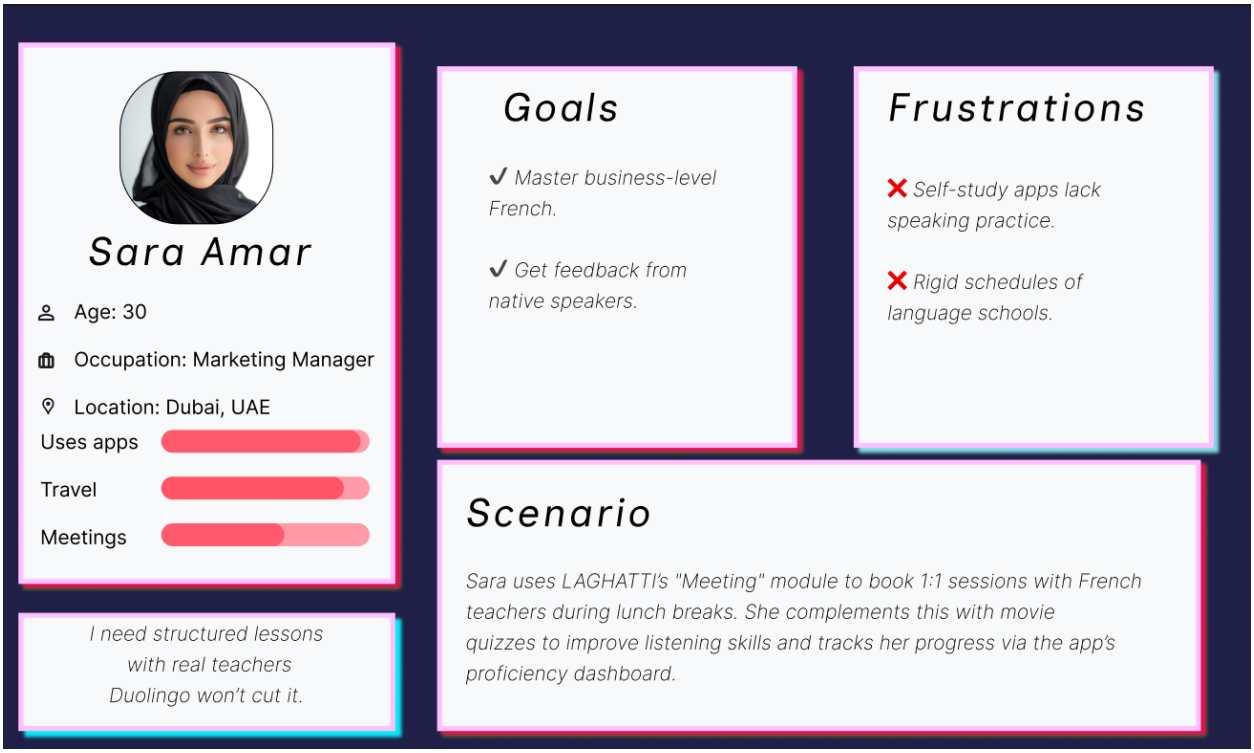

2. EMPATHIZE

2.1. Personas

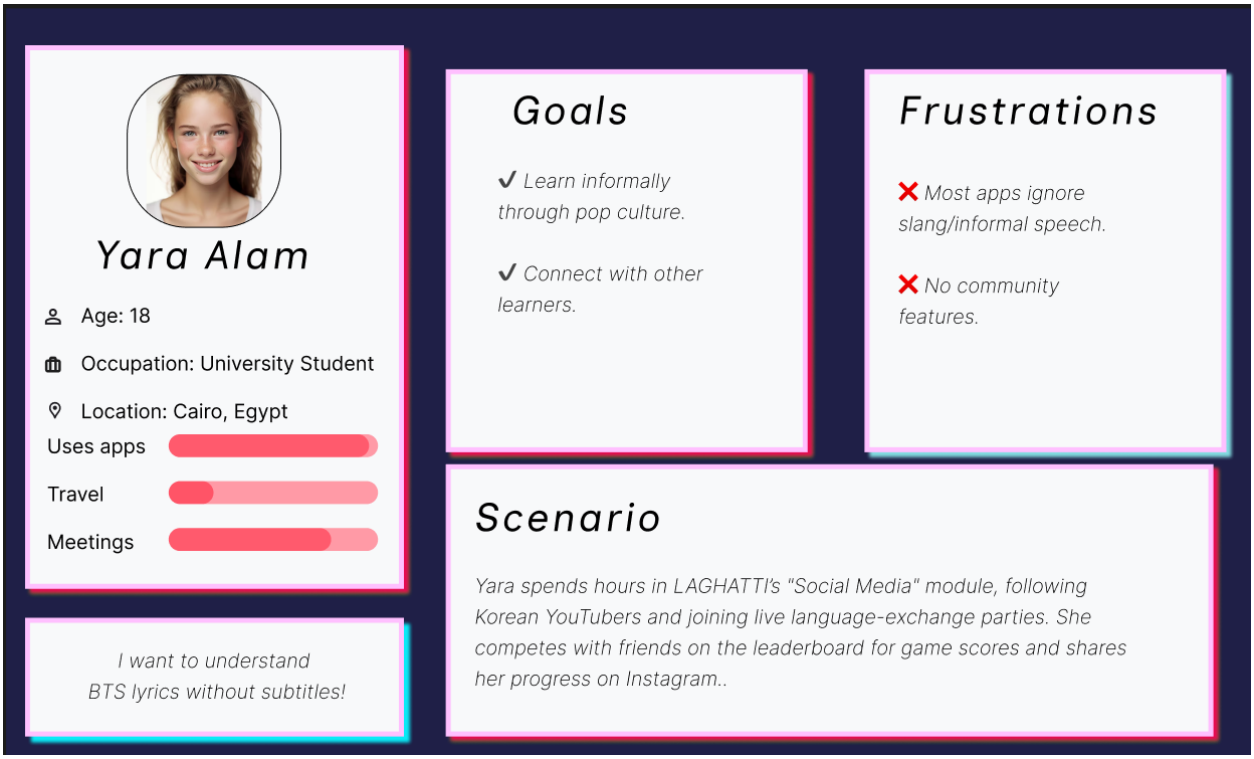

Persona 1:

Ahmad Ali
Age: 25
Occupation: Sales Associate
Location: Riyadh, Saudi Arabia
Uses apps
Travel
Meetings
I just need enough Spanish to order food and ask for directions no grammar drills!
Goals
✓ Learn practical phrases quickly.
✓ Fun, bite-sized lessons during commute.
Frustrations
✗ Traditional apps feel like "homework."
✗ No real-world practice (e.g., speaking with natives)
Scenario
Ahmed downloads LAGHATTI before his trip to Barcelona. He skips grammar-heavy apps and loves the 5-minute word-matching games and travel-themed short films. The app's social feature helps him follow Spanish influencers to learn slang.

Persona 2:

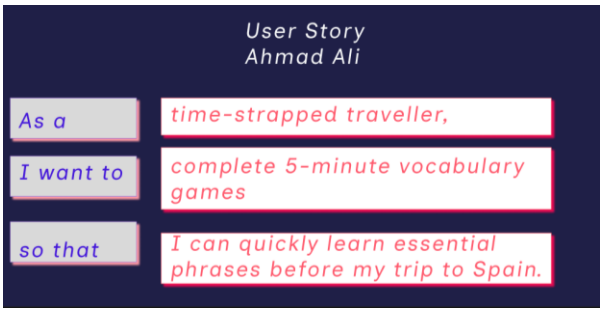

Sara Amar
Age: 30
Occupation: Marketing Manager
Location: Dubai, UAE
Uses apps
Travel
Meetings
I need structured lessons with real teachers Duolingo won't cut it.
Goals
✓ Master business-level French.
✓ Get feedback from native speakers.
Frustrations
✗ Self-study apps lack speaking practice.
✗ Rigid schedules of language schools.
Scenario
Sara uses LAGHATTI's "Meeting" module to book 1:1 sessions with French teachers during lunch breaks. She complements this with movie quizzes to improve listening skills and tracks her progress via the app's proficiency dashboard.

Persona 3:

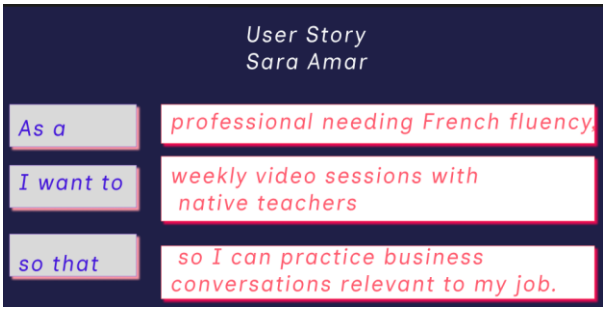

2.2. User Stories

User Story 1:

User Story 2:

User Story 3:

2.3. User Journey map

Yara (The K-Pop Fan)

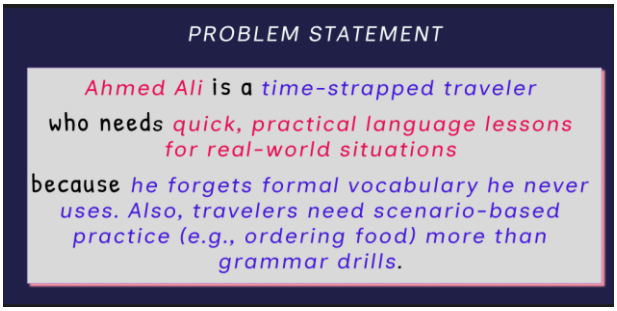

Goal: Learn conversational Korean to understand BTS lyrics and connect with fans.

Action	Task List	User Emotions	Improvement Opportunities
Discover App	A. Sees TikTok ad: *"Learn Korean to understand BTS lyrics!"*	Excited	Partner with K-Pop fan accounts for authentic promo
	B. Checks LAGHATTI hashtag	Skeptical	
	C. Downloads app		
Onboarding	A. Selects *"Learn for K-Pop"*	Thrilled	Add *"Start with Watching a movie "* shortcut
	B. Picks favorite BTS YouTube accounts song	Impatient	
	C. Skips boring grammar intro		
First Lesson	A. Plays *"Lyric Game"* (Korean ↔ English)	Engaged	Add *"Slang Dictionary"* tooltip
	B. Watch some videos for Korean	Confused	
Practice	A. Join courses with BTS Fans Teacher.	Proud	Integrate fan challenges (e.g., *"Top Translator of the Week"*)
	B. Take quiz with K-pop fans		
	C. Share score in X.	Connected	
Success	A. Contact with BTS Fans and understand them	Euphoric	Add *"Fan Meetup"* event planner
	B. comment in famous people account using Korean	Motivated	

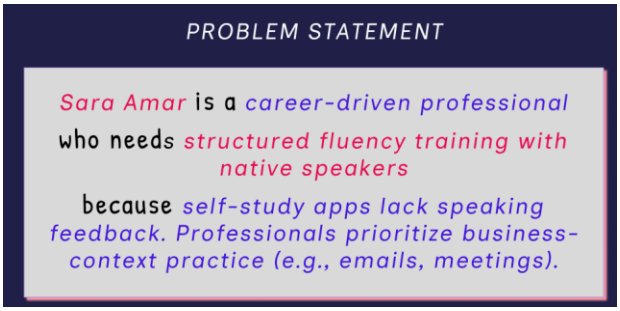

3. DEFINE

Gaming Level Page

Watching a movie Page

4.2. Competitive Audit

1.Competitive Audit Goal

The goal of this audit was to analyze existing language learning apps, identify gaps in fun, social, and culturally relevant learning experiences, and determine how LAGHATTI can combine the best features to make language learning feel like entertainment.

2. Who are your key competitors?

Duolingo: A gamified app that teaches languages through bite-sized lessons and streaks.
HelloTalk: A social language-exchange app where users chat with native speakers.
Memrise: A video-based app that teaches vocabulary through clips of real locals.

3.What are the types and quality of competitors' products?

Duolingo *creates a clear connection between gameplay and basic vocabulary retention. The app's gamified lessons are highly engaging but lack real-world context or cultural depth.*

HelloTalk *focuses on direct language exchange with native speakers. Its chat-based practice is authentic but unstructured and risky for younger users.*

Memrise *uses real-life video clips to teach vocabulary. The content feels immersive but is limited to memorization, with no live interaction or advanced grammar.*

4.How do competitors position themselves in the market?

Duolingo *positions itself as a "free, fun, and science-backed" starter app for casual learners.*

HelloTalk *markets as "the social network for language exchange" with real native speakers.*

Memrise *emphasizes "learning like a local" through authentic street videos.*

5.How do competitors talk about themselves?

Duolingo: *"Gamified lessons that make learning addictive."*

HelloTalk: *"Practice languages by chatting with real people worldwide."*

Memrise: *"Real-world vocabulary used by locals."*

6.Competitors Strengths

1. Duolingo:
   - Addictive streak system
   - Free with no paywalls for basics
   - Beginner-friendly UI
2. HelloTalk:
   - Real-time correction by natives
   - Voice messaging for pronunciation
3. Memrise:
   - Video clips of locals in natural settings
   - Offline mode

7.Competitors' Weaknesses

1. Duolingo:
   - No human interaction
   - Overly repetitive exercises
2. HelloTalk:
   - Safety risks (unmoderated chats)
   - No gamification
3. Memrise:
   - Limited language depth
   - No live teachers

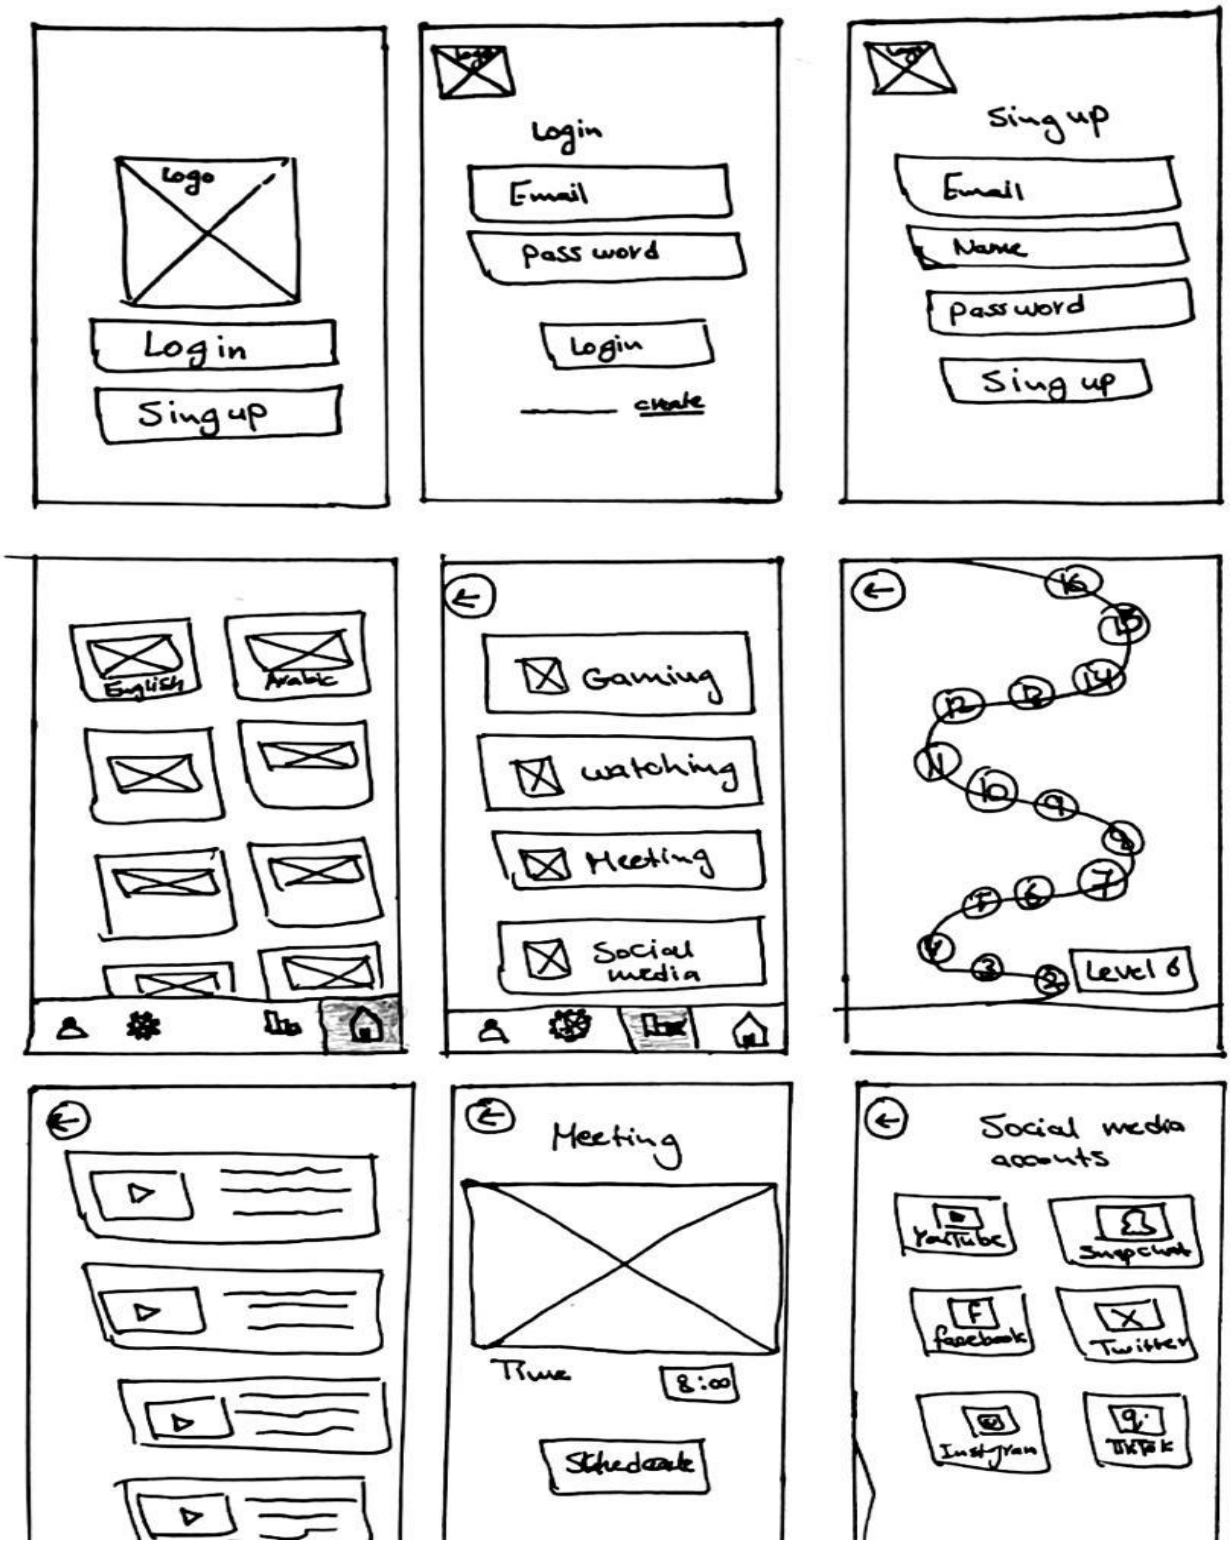

8.Gaps

- No app merges games + social media + live teachers in one platform.
- Weak Arabic-language content (e.g., no Arabic pop-culture integration).
- Isolated learning: Competitors lack community features (e.g., K-pop fan clubs for learners).
- Inaccessible design: Most apps ignore RTL (right-to-left) layouts for Arabic users.

9.Opportunities

- Become the "Netflix of Language Learning":
- Curate short films/music videos with interactive subtitles.
- Niche communities:
- Create fan clubs (e.g., "BTS Learners' Hub") with shared challenges.
- Hybrid model:
- Combine Duolingo's games + HelloTalk's chats + Memrise's videos.
- Accessibility:
- Prioritize RTL design, screen-reader compatibility, and dyslexia-friendly fonts.
- Brand Identity:
- Use consistent, vibrant visuals across mobile/web (e.g., Arabic calligraphy motifs).

5. PROTOTYPE

5.1 Low-Fidelity Prototype

5.1.1. User Flow

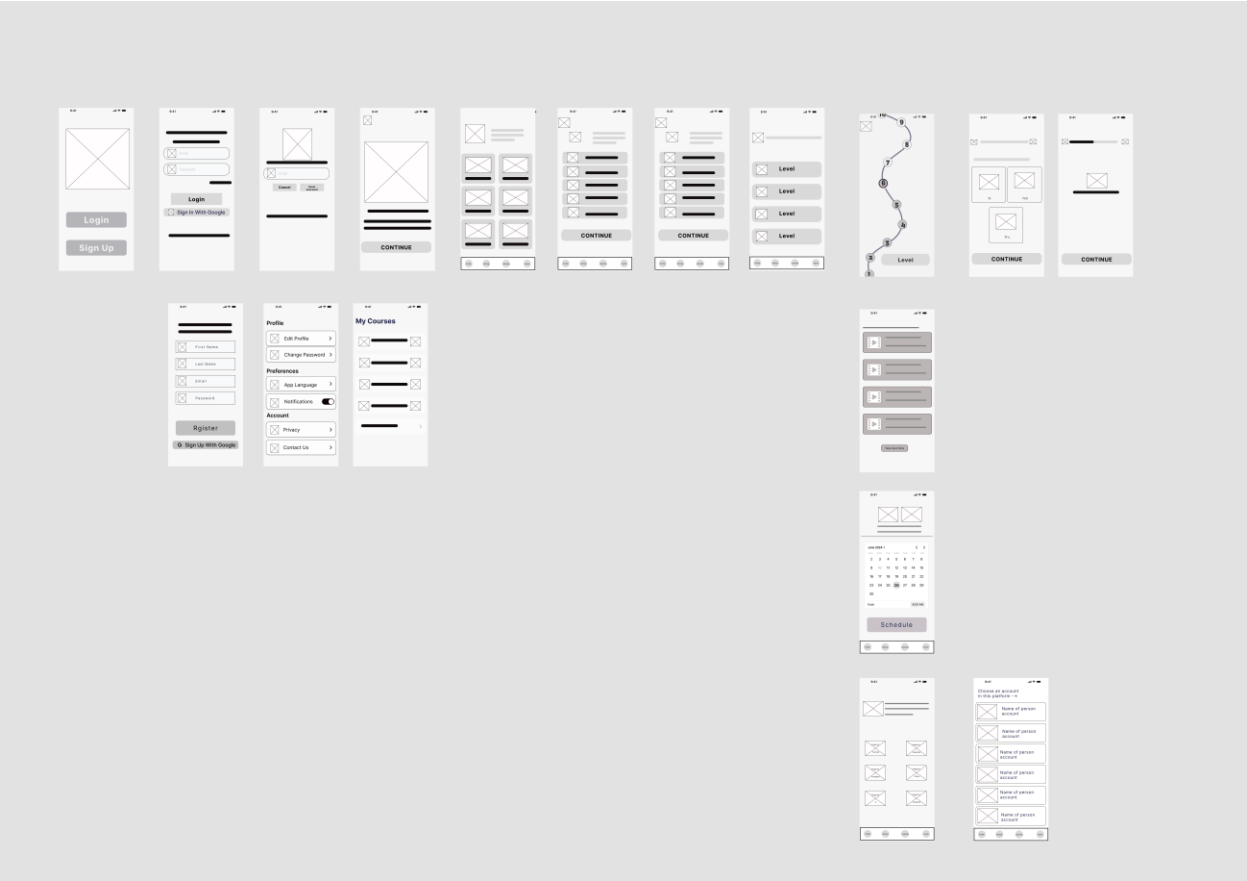

5.1.2. Storyboard

Scenario: Asma and Laila love traveling but struggle with language barriers. Traditional courses waste their time—until they discover LAGHATTI.
From Frustration to Fluency

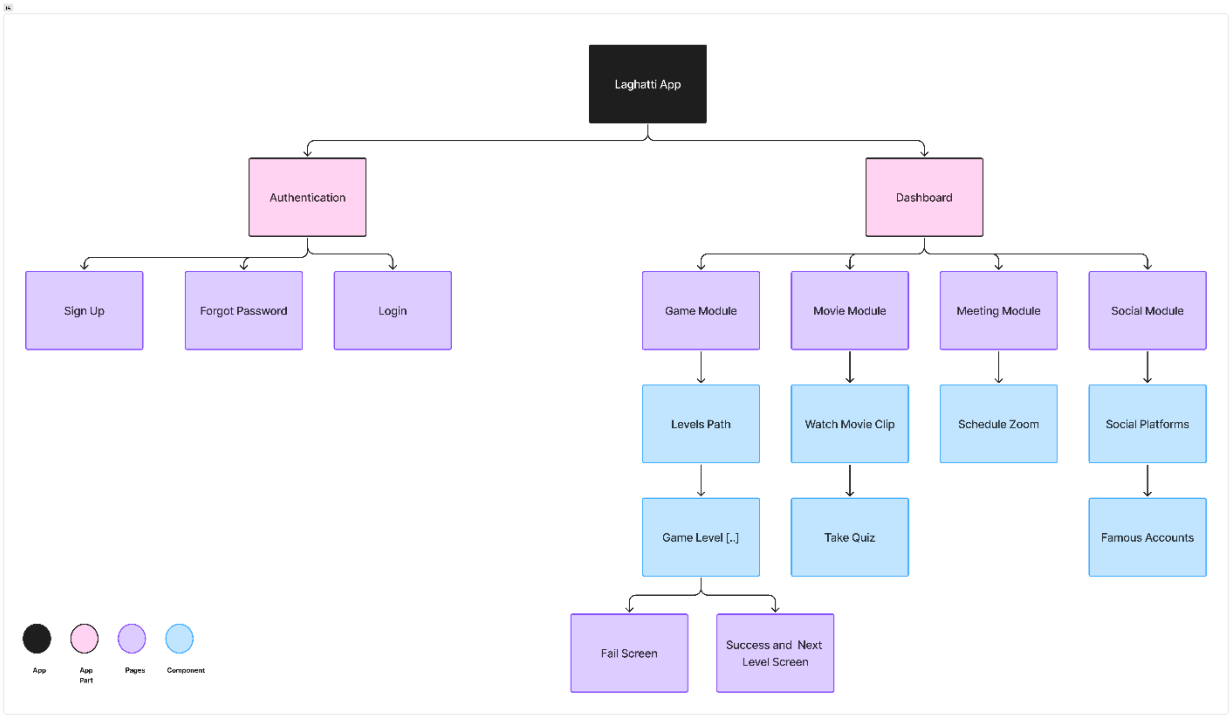

Take decision to use the app	The Language Barrier	The Discovery	Personalized Setup
			
Asma and Laila love traveling but struggle with language barriers.	Asma and Laila staring confused at a French menu in a Parisian café. The waiter looks impatient.	Laila's phone screen showing the LAGHATTI app (logo with Arabic calligraphy + globe) alongside social media ads saying "Learn French while watching travel vloges!"	LAGHATTI adapts to their trip no irrelevant lessons!

Gamified Learning	Watching movie	Real-World Practice	Triumph
			
Word-matching game ("croissant" 🥐 + "café" ☕)	They watch short film to learn French how that can use it	Suddenly, foreign films make sense and they're acing quizzes!	Asma confidently ordering "Deux croissants, s'il vous plaît" while Laila cheers. The waiter smiles.

6. UXD PRINCIPLES

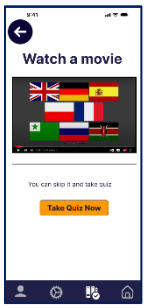

6.1. Universal Design principles

1. Equitable Use

Example: The "Sign In With Google" option allows users to log in easily, making the platform accessible for those who may have difficulties with traditional login methods.

Users can translate video text, using both voice and text in games. This way, everyone can enjoy the content, no matter how much they like to interact.

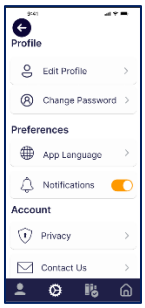

2. Flexibility in Use

Example:

Users can choose between different learning methods (e.g., "Gaming," "Watching a Video"), allowing them to engage in ways that suit their preferences.

Users can easily open or close notifications. This flexibility allows everyone to customize their experience.

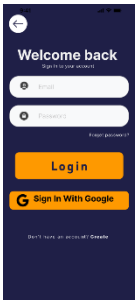

3. Simple and Intuitive Use

The interface is user-friendly, letting users navigate, complete tasks, and communicate quickly. Clear labels and a simple layout make it easy to understand how to use the platform. Example: The interface features clear labels and straightforward navigation, such as the "Sign Up" and "Login" buttons, making it easy for users to understand their options.

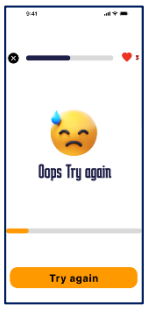

4. Perceptible Information

Important information is shown clearly, so users can easily find notifications, updates, and key features without confusion. Example: Important information like "Forget password?" is clearly visible and easy to locate, ensuring that all users can access essential features.

5. Tolerance for Error

The design encourages users to try again if they make a mistake, like in quizzes or games. This approach helps reduce frustration and creates a positive learning environment. Example: The "Try again" prompt after a quiz question encourages users to learn from mistakes, reducing frustration and fostering a supportive learning environment.

6. Low Physical Effort

The interface is designed to require little physical effort. Buttons are the right size, and navigation is simple, making it easy for users with different abilities. The design allows for easy interaction with buttons and forms, minimizing the need for extensive physical effort, which is beneficial for users with mobility challenges.

Example: The language selection dropdown menu is user-friendly and easily clickable, minimizing the need for scrolling. Users can quickly locate and choose their preferred language, enhancing navigation efficiency.

6.2. Accessibility, Inclusive Design or Equity-Based Design Principles

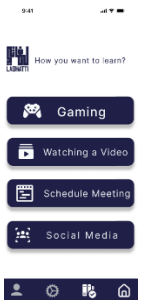

1. Perceivable Information

High-contrast text and visuals: The platform uses high-contrast colors for the text and background, making it easier for users with visual impairments to read and understand the content.

2. Visual Hierarchy

Organized layout of information: Important sections, such as "My Learning" and "Schedule Meeting," are visually distinct and clearly labeled. This helps users quickly locate essential features.

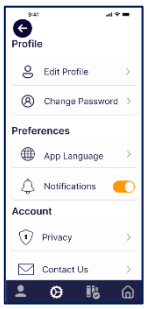

3. Understandable Content

Clear language and instructions: The text uses simple language, and the instructions are clear, making it easier for users with varying literacy levels to understand how to navigate the platform.

5. Feedback and Support

Help sections and tooltips: Contextual help is available through tooltips and FAQs, enabling users to find assistance easily and understand how to use the platform. This approach promotes inclusivity.

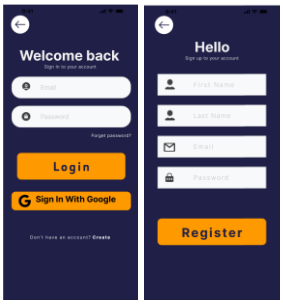

These principles aim to create a user-friendly environment that accommodates all users, regardless of their abilities or backgrounds. They focus on ensuring that the platform is accessible and inclusive, promoting equity in the user experience.

6.3. Gestalt principles

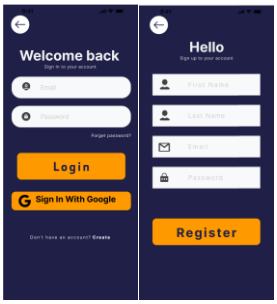

1. Similarity

Elements that appear similar are perceived to belong together. For instance, items of the same color or shape are grouped. For example, in the "Login" section, the buttons for "Sign In" and "Sign Up" share similar colors and shapes, leading users to view them as related actions.

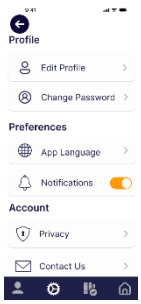

2. Proximity

Elements that are placed close to each other are seen as more related than those that are spaced farther apart. This principle highlights spatial relationships. For example, the fields for "Email" and "Password" in the login form are positioned closely together, indicating they are part of the same process.

3. Common Region

Elements located within the same boundary or area are grouped. For instance, items inside a shaded box are perceived as a unit. Example: The section titled "Profile," which includes options like "Preferences," "Account," and "Change Password," is enclosed within a defined area, helping users to see them as a cohesive group.

4. Closure and Continuity

The progress indicators, such as the levels in language learning ("English 100%" and "Spanish 45%"), create a sense of continuity, allowing users to view their learning journey as a connected path.

5. Symmetry and Asymmetry

- **Symmetry**: Symmetrical elements are seen as a cohesive group. For example, the layout of the "Schedule Meeting" section may use symmetrical elements (such as evenly spaced buttons) for a balanced appearance

- **Asymmetry**: Asymmetrical elements can still achieve balance and harmony through visual weight. The language options may be displayed in a staggered or varied layout rather than in a straight line. This asymmetrical arrangement can create a more visually engaging and dynamic look, drawing users' attention to the different choices available. It helps to prevent a monotonous appearance, making it easier for users to wipe and select their preferred language quickly.

7. AI TOOL(S)

1. **Storyboard Image Generation**
   - **Tool**: Runway DALL·E 3
2. **Information about languages and famous people in each language**
   - **Tool:** Poe GPT-40
